SUMMARY

Frontend Engineer with 5+ years of experience building and scaling Angular applications for SaaS platforms. Focused on frontend architecture, performance optimization, and reusable component design; own key frontend modules end to end, from technical decisions to long-term maintainability.

Experienced in modernizing legacy systems, migrating state management to modern reactive patterns, and improving product stability through better architecture and clean code practices.

SKILLS

Core: Angular, TypeScript, RxJS

Architecture: NgRx, Angular Signals, Nx (monorepo, shared libraries)

Testing: Jasmine, Karma, Jest, Cypress

APIs & Real-time: REST APIs, WebSockets, long polling

Build & Monitoring: Webpack, esbuild, Sentry, Docker (local dev environments)

Practices: Performance optimization, clean architecture, scalable frontend design

AI-assisted development: Claude Code, Windsurf

WORK EXPERIENCE

Frontend Developer — RedCore *Nov 2021 – Present*

- Rebuilt a real-time chat module as a standalone Angular 17+ Web Component with NgRx, enabling reuse across multiple products and cutting integration time and duplicate code by roughly 30%.
- Designed a scalable frontend architecture for key modules using an Nx monorepo and shared libraries, improving modularity and reducing bundle size and build times.
- Led the migration of state management to Angular Signals / Signal Store, simplifying reactive flows and reducing state-related bugs; cut load time on a key page (Telegram bot config) from 11s to 2s.
- Improved frontend stability and observability by introducing structured incident-triage workflows and Sentry monitoring, shortening issue-resolution time and reducing critical production incidents.
- Refactored legacy RBAC/ABAC and i18n systems using SOLID principles, reducing coupling and improving maintainability of access-control and localization logic.
- Drove frontend architecture decisions, led code reviews, and established team best practices to improve code quality and development consistency.

Tech stack: *Angular 17+, TypeScript, RxJS, NgRx, Angular Signals, Nx, Web Components, AG Grid*

Frontend Developer — WellnessLiving *May 2020 – Oct 2021*

- Built and optimized responsive UI components for dashboards, forms, and analytics modules, improving mobile usability and session duration.
- Refactored legacy jQuery/JavaScript code and improved the asset-loading strategy, cutting average page load time from 3.6s to 2.1s and improving time-to-interactive.
- Designed and implemented a reusable UI component library, cutting development time for new features by roughly 25% and improving consistency across modules.
- Implemented client-side validation and real-time API-driven updates, reducing form submission errors and related support tickets.

Tech stack: *JavaScript, jQuery, HTML5, CSS3, LESS, REST APIs*

EDUCATION

National Technical University of Ukraine

LANGUAGES

English — Upper-Intermediate (B2)
