

Kotyk Anna

DevOps/Monitoring Engineer

Contacts

- Phone and telegram: 098 640 43 25
- Gmail: annakotyk.1715@gmail.com

Hard skills

- Docker, Docker compose
- Clouds: AWS (EC2, S3, Cloudwatch, Route 53, Lambda, IAM, LB, ECS, autoscalling, VPC,)
- CI/CD: GitHub Actions, GitLab
- IaaS: Terraform
- Monitoring: Zabbix, ELK, Grafana
- Linux: Ubuntu/FreeBSD
- Networking
- SQL (Basic queries, backup/restore)
- Automation: Bash, Python
- Git

Soft skills

- Involvement in the project
- Attention to details
- Responsibility
- Continuous Learning & Curiosity

Languages

- Ukrainian (native speaker)
- English (B1)

Job Experience

DevOps / Monitoring Engineer | Epicentr Marketplace

April 2025 – Present

- Infrastructure Monitoring: Managed system health using Zabbix, ensuring 24/7 uptime for servers and services through agent deployment and host configuration.
- Automation: Automated monitoring configuration, host onboarding, and alert provisioning through scripting, reducing manual setup time and configuration drift across environments.
- Observability & Alerting: Built end-to-end observability by correlating metrics, logs, and events, and designed and tuned alerting thresholds, notification routing, and escalation policies to cut alert fatigue and speed up issue detection and resolution.
- CI/CD & GitOps: Implemented GitOps workflows for monitoring-as-code, version-controlling Zabbix templates, Grafana dashboards, and alert rules in Git and deploying changes through CI/CD pipelines for consistent, auditable, and repeatable rollouts.
- Incident Management: Performed initial triage of alerts, noise filtering, and escalation of critical issues to the engineering team.
- Visualization & Reporting: Developed custom Grafana dashboards to visualize key performance metrics and system trends.
- Log Analysis: Conducted primary log analysis using the ELK stack (Elasticsearch, Kibana) to identify root causes of infrastructure incidents.
- Security Collaboration: Partnered with the Information Security team to monitor for suspicious activity, track vulnerabilities, and ensure rapid response to security-related incidents.
- Documentation: Created and maintained an internal Knowledge Base, incident logs, and technical documentation (runbooks, guides, procedures) to streamline troubleshooting and team onboarding.
