Проживает: Минск
Гражданство: Беларусь, есть разрешение на работу: Беларусь
Готов работать удалённо, не готов к командировкам

Желаемая должность и зарплата

Fullstack-разработчик

Специализации:
— Программист, разработчик
Тип занятости: полная занятость
Формат работы: удалённо
Желательное время в пути до работы: не имеет значения

Опыт работы — 1 год 9 месяцев

Март 2026 — Сентябрь 2026
7 месяцев

(AI Interactive Media Platform) — Project-based (NDA)

Fullstack-разработчик

Project is a B2B SaaS platform for building and publishing interactive video experiences — branching narratives, overlays, voice control (SmartListen), analytics, embeddable playback, subscriptions, and AI-generated content.

Worked across four connected codebases: Django REST API (backend), legacy Angular editor (frontend), new React editor (frontend-v2), and modular TypeScript player.

Key contributions
Angular → React editor migration (main focus)

Led development of the new React 19 editor as a replacement for the production Angular 14 app: graph-based canvas (@xyflow/react), Remotion video composition, media library, publish/preview flow.
Ported critical features with behavioral parity — especially SmartListen voice-command validation, publish workflow, and legacy project data handling.
Built cross-subdomain JWT auth so users could move between Angular and React editors during the transition.
Introduced incremental API migration: OpenAPI codegen + legacy API wrapper, moving from editor v1 to v2 endpoints.
Backend (Django / AWS)

Developed and maintained REST APIs for projects, assets, publish/unpublish, auth (Stytch + JWT), Stripe billing, and AI modules (asset generation, project jobs, credit wallet).
Worked on the media pipeline: S3 presigned upload → Step Functions → MediaConvert encoding → CloudFront delivery.
Integrated real-time job status via WebSocket notifications for publish/encoding progress in the UI.
Player & fullstack integration

Connected the React editor to the modular player via iframe preview and campaign schema v14 compatibility.

Debugged end-to-end flows: asset upload → encoding → preview → publish → public embed.
Stability & legacy support

Fixed production bugs from QA across Angular editor, React editor, backend, and player.
Maintained the legacy Angular editor during the migration period (redirects, beta handoff, hotfixes).
Tech stack
Frontend: React 19, TypeScript, Vite, Redux Toolkit, TanStack Query, Tailwind, XYFlow, Remotion, Angular 14, RxJS
Backend: Python, Django, DRF, PostgreSQL, MongoDB
AWS: ECS, S3, CloudFront, Lambda, Step Functions, MediaConvert, EventBridge, WebSocket API
Integrations: Stripe, Stytch, Sentry, Datadog, GitHub Actions, Terraform

Celadonsoft

Fullstack-разработчик

Responsibilities included:
- Developed cross-platform UI for iOS and Android.
- Integrated APIs for authentication, real-time odds, and notifications.
- Set up and maintained deployment pipelines using Ansible; configured Nginx for backend routing and API proxying.
- Development server & client side project systems.
- Development external systems (hub, pre rendering).
- Integration of project systems using REST API.
- Project deployments (CI/CD, Docker).
- Fixed a large number of bugs, found by the QA team.

Care.by (Startup)

Backend Developer

Development of the server-side component of the product, including:
- Orchestration of microservices;
- Implementation of progressive data loading (media/image service);
- Design and development of authentication services;
- Implementation of core business logic.

Дополнительная информация

Обо мне

Motivated and detail-oriented developer with a strong interest in full-stack and mobile development. Solid foundation in JavaScript, React, and backend tools, with hands-on experience in real commercial projects. Eager to grow in a collaborative team, contribute to impactful products, and continuously improve technical and soft skills. Quick learner, proactive, and ready to take on new challenges in a fast-paced development environment.
