ARTEM KALUHIN

Remote, Europe | kaluhin.artem.work@gmail.com

PROFESSIONAL SUMMARY

Middle Fullstack Engineer with around 3 years of experience building B2B and B2C SaaS applications, IoT platforms, and cloud-based systems using TypeScript, React, Node.js, NestJS, PostgreSQL, and AWS. Comfortable working across the stack, from designing backend services and data pipelines to building responsive frontends, with a growing focus on reliability, maintainability, and clear ownership of features. Looking for a role where I can keep growing technically while contributing to full-stack product development.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Kotlin, Solidity, SQL, C/C++
Backend: Node.js, NestJS, Express.js, REST, GraphQL, WebSockets, OAuth2, Passport.js
Frontend: React, Next.js, Vue.js, Redux, Zustand, Tailwind CSS, Material UI, Jetpack Compose
Data/Cloud: PostgreSQL, MongoDB, MySQL, DynamoDB, Redis, Firebase, AWS (Lambda, SQS, S3, CloudFront), Docker, Kubernetes, CapRover, CI/CD
Tools & Practices: Git, Agile, Jest, API validation, code review, architecture design, Blockchain (Ethereum, Web3.js, Solidity, Hardhat, OpenZeppelin)

WORK EXPERIENCE

HaloLab Nov 2025 – Mar 2026
Full-Stack Engineer *Remote*

- Designed and built a server-side IoT backend from scratch using NestJS, TypeScript, and PostgreSQL, including OAuth2 social authentication via Google and Apple.
- Engineered a real-time metrics ingestion pipeline for high-frequency Bluetooth sensor data, designing a PostgreSQL time-series schema with efficient read and write patterns.
- Implemented a Redis caching and session-management layer for frequently accessed sensor telemetry data.

NovaTech Solutions LTD Apr 2024 – Oct 2025
Full-Stack Developer *Remote*

- Built an EdTech language learning platform with spaced repetition, progress tracking, and adaptive vocabulary retention using Node.js, Express, TypeScript, React, Next.js, and PostgreSQL.
- Added Redis caching and optimised PostgreSQL queries for leaderboard and analytics endpoints.
- Architected a serverless AWS pipeline using Lambda, SQS, S3, and DynamoDB for automated investment report generation with retry logic and queue-based reliability.
- Built Lambda functions to ingest data from Google Sheets API, trigger PDF generation with PDFKit, and deliver reports via pre-signed S3 URLs with asynchronous processing.
- Designed backend infrastructure for Android mobile games, including player profiles, leaderboards, in-game currency, and matchmaking logic.
- Containerised backend services with Docker, implemented event tracking for player actions and game sessions to support data-driven balancing decisions and analytics pipelines.

Meridian Digital Works Sep 2023 – Mar 2024
Full-Stack Developer *Remote Contract*

- CRM and workflow management platform for field service teams managing customer records, task assignment, role-based access, and operational dashboards using TypeScript, NestJS, React, and PostgreSQL.
- Built REST API modules for customer profiles, service requests, task statuses, and user permissions, implementing role-based access flows for administrators, managers, and field operators.
- Developed a reusable React component library for tables, filters, forms, and dashboard widgets across product modules, improving UI consistency and delivery speed.

- Added Redis caching for reference data and session operations in dashboard views working with large service-record datasets.
- Implemented audit-friendly status tracking for workflow changes with structured error handling and API validation to reduce data inconsistency risks.

ADDITIONAL PROJECTS

Auto Service Marketplace & CRM Platform

- Architected a full-stack two-sided marketplace and subscription CRM connecting car owners with repair shops, using NestJS, Next.js, PostgreSQL with PostGIS for geo-search, and Redis, supporting real-time availability via WebSockets across 4 languages.
- Built a concurrency-safe slot booking system using PostgreSQL advisory locks to prevent double-booking, and a double-blind price confirmation mechanism to eliminate post-repair pricing disputes between clients and shops.
- Integrated Stripe for one-time, deposit, and recurring payments with webhook signature verification and idempotent retry handling, alongside Cloudflare R2 object storage and Resend transactional email.

DeFi Arbitrage Monitoring Platform

- Developed Web3 monitoring service using NestJS, WebSocket, Web3.js, and Ethers.js to track token price differences across CEX and EVM liquidity sources with configurable arbitrage signals and Redis market snapshots.
- Created Solidity smart contract prototypes with Hardhat, integrated MetaMask for wallet connectivity, and implemented PostgreSQL historical tracking with fallback handling for RPC and API failures.

EDUCATION

University of the West of England — Bristol, UK
BSc Computer Science, Upper Second-Class Honours — 2023 – 2025
Relevant coursework: IoT, Database Systems, Data Structures and Algorithms, Web Development

Kaplan International Pathways — Bristol, UK
Foundation Programme — 2022 – 2023
Relevant coursework: Artificial Intelligence, Programming in C/C++, Web Programming

LANGUAGES

English: C1 – Professional Working Proficiency | Ukrainian: Native | Polish: B1
