PROFESSIONAL SUMMARY

Shopify Developer with 4+ years on the platform and 8+ years in web development. I own the full storefront cycle — from Figma and pixel-perfect Liquid implementation on Online Store 2.0 to GitHub-based deployment and performance optimization.

Improved Core Web Vitals (LCP, CLS, INP) by 30–40% across projects and contributed to 15–20% organic traffic growth on high-traffic stores. I also replace paid third-party apps with native Metafields and Metaobjects logic — fewer dependencies, lower recurring cost, faster storefront.

Former Team Lead of 4–6 developers: I write code other people can maintain, and I review theirs.

TECHNICAL SKILLS

Shopify Core: Shopify Plus · Custom Liquid Theme Development · Online Store 2.0 · Dawn · Sections Everywhere · Metafields · Metaobjects · Shopify CLI · Theme Check

Internationalization: Multi-language and multi-currency storefronts · Liquid localization (localization object, translation files, hreflang, language and currency switchers) · RTL layouts

Automation & Lifecycle: Shopify Flow · Event-driven automation · Custom transactional and marketing email templates in Liquid · Subscription commerce

APIs: Admin GraphQL API · Storefront API · GraphQL

Frontend: JavaScript (ES6+) · TypeScript · React · Web Components · Tailwind CSS · SCSS · Styled Components · GSAP · HTML5

Performance & SEO: Core Web Vitals (LCP, CLS, INP) · Lighthouse · Code Splitting · Critical CSS · Image Optimization (WebP, lazy loading) · Structured Data

Tooling: Git · Git-flow · Shopify GitHub Integration (CI/CD) · Vite · Webpack · Figma

CMS: WordPress · Sage (Roots.io) + Blade · ACF · PHP

Familiar, no commercial projects yet: Hydrogen v2 / Remix · Shopify Functions · Checkout Extensibility

EXPERIENCE

Shopify Developer — Independent Contractor (B2B)

Self-employed · Remote · 01/2026 – Present

Ongoing Shopify work under NDA through long-term B2B contracts. Client names and identifying business details are confidential; technical scope and implementation decisions can be discussed during an interview.

- Leading a legacy theme migration to Online Store 2.0 alongside a complete storefront redesign, replacing an unmaintained Theme Kit and Vue 2 build.
- Replaced a paid custom-fields application with native Shopify Metafields and Metaobjects via the Admin GraphQL API, removing a recurring subscription and an external dependency from every page render.
- Introduced Git-flow and Shopify GitHub integration on a store previously edited live: branch-based development, code review and safer releases.
- Refactored legacy frontend code and improved image loading, theme performance and long-term maintainability.
- Developed new storefront functionality, Shopify Flow automations and custom Liquid email templates for a subscription-based e-commerce project.

Shopify Developer / Frontend Developer

Gelt.Biz · Warsaw, Poland · 03/2023 – 12/2025

- Architected scalable Shopify storefronts on custom Liquid themes built from Dawn, using Sections Everywhere, Metafields and Metaobjects so content teams could ship without a developer.
- Improved Core Web Vitals (LCP, CLS, INP) by 30–40% across 3 projects through code splitting, critical CSS extraction, WebP and lazy-loading image strategy, and legacy JavaScript refactoring.
- Connected Shopify stores to GitHub for version-controlled theme development, introducing branch-based workflow and code review in place of editing live themes.
- Built complex interactive storefront components with GSAP and Styled Components for product and campaign landing pages.

- Developed quiz funnels in GoHighLevel integrated with Meta Pixel and custom conversion events, giving marketing accurate campaign attribution.
- Built custom WordPress themes from scratch with Sage (Roots.io), Blade and ACF, following a Figma to markup to theme workflow.

Web Developer → Team Lead

Glivera-team · Kharkiv, Ukraine · 08/2017 – 03/2023

- Delivered custom Shopify themes from scratch across multiple client projects, including multi-language stores, RTL layouts and Shopify Plus-specific features.
- Promoted to Team Lead: managed 4–6 developers, introduced Git-flow standards and code review, reducing critical bug rate by approximately 30%.
- Optimized high-traffic e-commerce sites for technical SEO (structured data, page speed, Core Web Vitals), contributing to 15–20% organic traffic growth across key accounts.
- Resolved critical issues across 6–8 concurrent Shopify projects under tight deadlines, maintaining a consistent on-time delivery record.
- Mentored 3 junior developers from onboarding to independent delivery within 3–4 months.
- Built internal Webpack, Pug and SCSS boilerplates that cut project setup time for the whole team.

Web Developer (Part-time)

Software Development Hub · Kharkiv, Ukraine · 05/2017 – 07/2020

- Built responsive admin panels and CMS interfaces integrated with Django templates, ensuring cross-browser and pixel-perfect consistency.

SELECTED PROJECTS

- Legacy to Online Store 2.0 migration — replaced a Theme Kit and Vue 2 build with OS 2.0 architecture, a full redesign and GitHub-based CI/CD on a live storefront.
- App to native Metafields migration — rebuilt a paid custom-fields app's data layer on native Metafields and Metaobjects via the Admin GraphQL API; recurring cost eliminated.
- Shopify Flow email automation — event-driven transactional and marketing email system with custom Liquid templates for a subscription commerce store.

EDUCATION & CERTIFICATIONS

Advanced React Ecosystem — Next.js (SSR/SSG), Redux Toolkit, TypeScript · Udemy · 2023–2024

Front-end Development: HTML / CSS / JS · Lemon School · 2016

B.Sc., Transport Organization · Kharkiv National Automobile and Road University · 2008

LANGUAGES & COMMUNICATION

Ukrainian — Native

English — Professional working proficiency in written and technical communication: documentation, specifications, pull requests, code review. Async-first collaboration; comfortable with structured technical discussions. Spoken English actively improving.

Polish — Beginner, currently learning. Based in Wrocław long-term.
